SAFETY INTERLOCK SWITCH SMALL SIZE \& LIGHT FORCE

## FEATURES

- Constructed with dual restoration springs and double cut-off for safety - Contact gap of greater than 4 mm (Conforming to IEC 950)
- As for 3 Form A type, combination of power contact and signal contact is available
- UL/CSA/SEMKO/TÜV/VDE approved

## CONSTRUCTION

Dual safety construction

- Dual restoration spring
- Double cut-off type

## DIMENSIONS

1 Form A

2 Form A

3 Form A

Hole cutting dimension

| Panel thickness | 0.8 to 1.75 | 1.75 to 2.5 |
| :---: | :---: | :---: |
| Dimension A | $30.2_{-0}^{+0.1}$ | $30.5_{-0}^{+0.1}$ |

(Copper is standard as panel material)

- Signal switching contact

Remark: Power switching contact type has 250 Quick-connect terminal and signal switching contact type has 110 Quick-connect terminal.

## NOTES

## 1. Switch mounting

Mount the switch with the hole cutting dimensions shown in the drawing.
2. Adjustment of the operating device: With respect to the position of the operating device and the switch body, set the position as indicated in the condition on the right. If this condition is exceeded, the mechanical and electrical performance will be impaired. In addition, the force applied by the operating device should be in a perpendicular direction. Even if the pushbutton is used in the full total travel position, there will be no influence on the life of the switch.

Free condition
3. Confirming insulating distance Before mounting and wiring, the insulating distance between terminals and between the terminals and ground should be checked for assurance of proper distance. With respect to the terminal connections, it is recommended that receptacles with insulating sleeves or "Positive Lock Connector*" be used. Also consideration should be given to the wiring not to apply force to the terminal section normally.
*Registered by AMP, Ltd.
4. Regarding fastening lead wires to terminals
Use 250 receptacle (terminal thickness 0.8 mm ) or .110 receptacle (terminal thickness 0.5 mm ) should be used for connection. Make sure the sockets are straight. If they are skewed, the terminals will require excessive insertion force. The insertion force varies according to manufacturer's specifications. Check it for
the sockets you are using.

## 5. Material of the panel

Steel sheet is recommended as the panel material. When using soft material, confirm the condition for actual use.
6. Quality check under actual loading conditions
To improve reliability, check the switch under actual loading conditions. Avoid any situation that may adversely affect switching performance.
7. Avoid using and keeping switches in the following conditions.

- In corrosive gases
- In a dusty environment
- Where silicon atomosphere prevails

## REFERENCE

1. Outline of UL1054 test

Overload test
Standard type: 12.5A 250V AC
(Power factor 0.75 to 0.8 )
Endurance test
Standard type: 10A 250V AC
(Power factor 0.75 to 0.8 )
After testing, temperature rise of terminals should be less than $30^{\circ} \mathrm{C}$ and no abnormality should be observed in characteristics.

## 2. Outline of EN61058-1 test

After switching 25,000 times on the above load condition at both $85+{ }_{0}{ }^{\circ} \mathrm{C}$ and $25 \pm 10^{\circ} \mathrm{C}$, temperature rise of terminals should be less than $55^{\circ} \mathrm{C}$ and no abnormality should be observed in characteristics.

## SAFETY INTERLOCK SWITCH CONSTRUCTED WITH DUAL RESTORATION SPRINGS

## FEATURES

- 8 mm or more is assured as insulation distance between contacts (Snap-in mounting 2 Form A and 3 Form A type)
- Durability of 100,000 times (10.1A 250V AC) is assured for UL interlock circuit
- Constructed with easy-to-connect terminals
Terminal specifications is .250 QuickConnect (based on DIN standards) Connection can be made with insulating sleeve on connecting lug
- UL/CSA/VDE (ENEC) approved

## NOTES

## 1. Switch mounting

Mount the switch to a smooth surface using M4 screws. Tighten the screws with 0.3 to $0.5 \mathrm{~N} \cdot \mathrm{~m}\{3$ to $5 \mathrm{~kg} \cdot \mathrm{~cm}\}$ torque. To prevent loosening of the mounting screws, it is recommended that spring washers be used in combination with adhesive material for locking the screws.
2. Adjustment of the operating device: With respect to the position of the operating device and the switch body, set the position as indicated in the condition on the right. If this condition is exceeded, the mechanical and electrical performance will be impaired. In addition, the force applied by the operating device should be in a perpendicular direction. Even if the pushbutton is used in the full total travel position, there will be no influence on the life of the switch. Screw mounting type

Snap-in mounting type

## 3. Confirming insulating distance:

Before mounting and wiring, the insulating distance between terminals and between terminals and ground should be checked for assurance of proper distance. With respect to the terminal connections, it is recommended that receptacles with insulating sleeves be used.
Also, consideration should be given to the wiring not to apply force to the terminal section normally.

## 4. Avoid using AV1 switches in the following conditions:

- Locations where hydrogen sulfide gas or other corrosive gases exist.
- Locations where gasoline, thinner, or other inflammable or explosive gases exist.
- Locations where there is dust and refuse.
- For operation where the perpendicular operating speed is less than $10 \mathrm{~mm} / \mathrm{sec}$.
- For operation frequency of make/break exceeding 60 cpm .
- For ambient temperatures exceeding the range of $-25^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$.
- For ambient humidity exceeding $85 \%$ R.H.
- For use in a silicon atmosphere.

5. For use of AV14653F (1a1b type):

For the type AV14653F, the air distance between the N.O. and N.C. contacts is less than the required value of VDE. The N.O. and the N.C. contacts can carry only the same electric potential.

[^0]:    Remark: With the 3 Form A type sequence operation type, the specifications for the contact where the operation position turns ON first are as per the above table. However,
